**BBookX** is a new technology that uses a human-assisted computing approach to enable creation of open source textbooks. BBookX uses intelligent algorithms to explore Open Educational Resource (OER) repositories and return relevant resources that can be combined, remixed, and re-used to support specific learning goals. As instructors and students add materials to their book, BBookX learns and further refines the recommended material.

To create an account and start using BBookX, please visit: <https://bbookexp.psu.edu/>

We are always happy to meet with new users, to discuss various use cases and strategies instructors find successful with BBookX.
